Diagrama de flujo:

Algoritmo en Python

```
Python
from random import random
secuencia = input()
cont = 1
def generar_moneda():
      x = random()
      if x > 0.5: return "C"
      else: return "S"
a,b = generar_moneda(), generar_moneda()
numeros = []
for \_ in range(100):
      while True:
             c = generar_moneda()
             if a+b+c == secuencia:
                    numeros.append(cont)
                    cont = 1
                   break
             else:
                   cont +=1
                    a = b
                    b = c
                    continue
print(f'Promedio {sum(numeros)/len(numeros)}')
```
